REPORTS

13th Legion — Training Reference

Comms Basics · Training Block 3 · 2026

This is what you send. How you get the station, and the prowords you wrap around the report, are **Net Etiquette**. The nets and the codes are **Radio Familiarity**.

1. PROTOCOLS THIS BLOCK NAMES

The September 2026 update names three protocols and does not write the scripts in this deck. The follow-on lesson is the step-by-step. Do not invent the words on the air.

PROTOCOL	WHEN	THE BREVITY CODE THAT NAMES IT
AO Approach	Team convoy arrival	Ruby — request for AO entry
Mission Step-Off	Team on mission	Not given a code in this deck
RTB Request / Authentication	Team returning to the FOB after the mission	Ficus — return to base. Pine — ready for authentication. The authentication itself is a shackle code.

2. SALUTE

SALUTE is the observation report: what you saw of an opposing force while on patrol. A good one lets command build a picture of the threat. Send it in SOI codes so the other side does not read it off the air.

This block's letters, from the block's own list:

LETTER	REPORT
S — Size	Number of troops observed.
A — Activity	What they are doing. Bivouacked, moving north, repairing equipment, loading vehicles.
L — Location	Where the element is. A grid goes by shackle, not as raw digits.
U — Uniform	What they are wearing. The pasted reference on the source slide uses "Unit" (which opposing unit) in this slot. This block uses Uniform.
T — Time	When you observed them.
E — Equipment	Gear: vehicles, weapons, and the rest.

> **SALT** is the abbreviated version of SALUTE. This deck names it and does not say which letters it drops. Do not guess a short form and send that.

3. LACE

LACE is the team's own status, sent to the TOC from the field. It is the whole troop, not one person's comfort.

LETTER	ON THE AIR	WHAT IT IS
L — Liquid	Lima	Usually water. How much the element still has.
A — Ammo	Alpha	Ammunition. Combat effectiveness.
C — Casualties	Charlie	How many casualties the element has.
E — Equipment	Echo	Equipment pertinent to the mission. Can you still do the job with what you have.

Each letter is a color. The block calls these levels of progressive desperation:

COLOR	MEANING
Green	All good.
Yellow	Not perfect, but still mission effective.
Red	Problems that pose significant issues to the mission or the team's well-being.
Black	The mission cannot continue under current conditions.

4. LACE ON THE AIR

Contact first. Do not start the report until they tell you to send it. Break between letters so no transmission runs past 8 seconds. The block's example:

STATION	TRANSMISSION
Blackfoot 9	Geronimo Main, Geronimo Main, this is Blackfoot 9, over
Geronimo	Blackfoot 9, this is Geronimo Main, over

Main	
Blackfoot 9	Geronimo Main, this is Blackfoot 9, LACE report incoming, over
Geronimo Main	Blackfoot 9, this is Geronimo Main, send it, over
Blackfoot 9	Geronimo Main, this is Blackfoot 9, Lima — Green — break. Alpha — Yellow — break. Charlie — Green — break. Echo — Green — over
Geronimo Main	Blackfoot 9, this is Geronimo Main, Roger, out

> **WHY THE BREAKS:** The block says the breaks are there to keep each transmission under 8 continuous seconds. Unkey on each break. Geronimo Main closes with Roger, out — receipt, and no answer expected.

5. CASEEVAC — 9-LINE, THEN MIST

The block calls the casualty evacuation request a **TSM modified 9-line**. Send it clear and concise. **Lines 1 through 5 go on the initial call.** Lines 6 through 9 follow while the aircraft is en route. A MIST report comes after the 9-line.

LINE	SEND
1	Location of the pickup site. Grid of the extraction point.
2	Radio frequency, call sign, and suffix for the pickup site.
3	Number of patients by precedence. A urgent. B urgent surgical. C priority. D routine. E convenience.
4	Special equipment. A none. B hoist. C extraction equipment. D ventilator.
5	Number of patients by type. L litter. A ambulatory. Give the count for each.
6	Security of the pickup site. N none. P possible. E enemy. X engaged. Enemy troops, not the patient's condition.
7	Method of marking the pickup site. Panels, pyrotechnics, smoke, or another signal.
8	Patient nationality and status. A is US military. B is US civilian.
9	Wartime: NBC contamination (nuclear, biological, or chemical). Peacetime: terrain at the site.

> **LINES 1–5 FIRST.** Do not hold the aircraft request for lines 6 through 9. Those go out while it is already en route. A grid on line 1 still goes by shackle, not as raw digits.

MIST

MIST is the patient detail that follows the 9-line. It is not a substitute for the nine lines.

LETTER	REPORT
M — Mechanism	Mechanism of injury. What happened to them.
I — Injuries	Injuries sustained.
S — Signs	Vital signs.
T — Treatment	Treatment given.
